

Digta 7 PREMIUM

DICTATION REINVENTED

XXL DISPLAY

The display is especially big, clear, and very readable in the glare of direct sunlight. In its "Easy Mode" setting, it's streamlined to its most essential functions. Especially practical: the dynamic display of dictation length and residual battery capacity.

SHOCK-ABSORBING HOUSING

The Soft Touch housing is known for its high-quality, ergonomic design. It's also extremely robust and shock-absorbing, while resting easily and slip-free in the hand.

LITHIUM-ION RECHARGEABLE BATTERY

You can work significantly longer with this efficient lithium-ion rechargeable battery. And the Digta 7 can be operated using standard batteries as well. This way, you're ready and able to work anytime, anywhere.

SPEECH RECOGNITION FOR DICTATION ID

With the button above the slide switch, Nuance VoCon® Speech Recognition starts up, ready for receiving the dictation title. Speak naturally, even when reciting multi-digit file codes or patient ID numbers. Additionally, each dictation receives a unique dictation ID (UUID), so that it can be clearly coded for user-friendly filing.

DUAL MICROPHONE TECHNOLOGY

Two microphones provide for fantastic audio quality. With a stereo play-back recorder, you're all set for interviews, conferences, and other recording needs. And you can choose the format to take your recordings in (DSS/DSSPro/MP3 for smaller files that can be transferred quickly, and WAV for stereo recording).

SLIDE SWITCH WITH TOUCH PIN™

The Digta 7 has a slide switch with a "Touch Pin". The pin only protrudes when the switch is set on "Stop". This way, you can dictate with your eyes closed; you'll clearly feel if the switch is set on Record or Pause. Plus, the slide switch can be configured to meet your dictation style, set for the functions you need most – making it especially practical for beginners.

DOCKING STATION DIGTA STATION 447 PLUS

With its timelessly elegant design, the Digta 7 Premium is an eye-catcher on your desk. As it rests in the Digta Station 447 Plus docking station, you can be transferring all of your dictations to your PC, quickly and easily. Meanwhile, your rechargeable battery is getting recharged during every dictation break. A second rechargeable battery can be recharged separately in the docking station. Connect the foot control for hand-free dictation; add a headset, and the docking station can be used as a complete transcription station.

ALTERNATELY AVAILABLE WITH BLUETOOTH

DIGTA 7 PREMIUM BT WITH BLUETOOTH

The Bluetooth model makes it especially easy to transfer dictations on the go. You can connect your dictation device quickly and directly to your smartphone (Blackberry, for example) and send your dictations from there. And the Digta 7 Premium BT is prepared to work with other Bluetooth products, such as a headset, hearing device, or a PC.
